

CRISMACHEM S.L. Sustainability Policy

At **CRISMACHEM**, we understand sustainability as a strategic pillar that guides our activity and decision-making. Our commitment goes beyond regulatory compliance: we integrate environmental, social and governance (ESG) criteria into all our operations, promoting responsible, innovative management focused on creating long-term value.

As a company specialising in chemical solutions and technical additives, we are aware of our responsibility within the industrial supply chain. We therefore work actively to minimise our environmental impact, strengthen our good governance practices and contribute positively to our economic and social environment.

Sustainability at **CRISMACHEM** is based on continuous improvement, objective performance measurement and transparency towards our stakeholders.

Our environmental commitment

With the aim of progressively reducing our environmental footprint, we focus our efforts on:

Logistical and operational optimisation to minimise impacts associated with transport and business activity.

Continuous improvement in energy efficiency and the responsible use of water and other resources.

Reducing the consumption of raw materials and applying circular economy principles.

Developing and selecting technical solutions that contribute to greater durability and efficiency in our customers' end products.

Measuring, managing and reducing our carbon footprint, in line with official initiatives such as the Carbon Footprint Registry, Offsetting and CO₂ Absorption Projects of the Ministry for Ecological Transition and Demographic Challenge (MITECO).

Responsible supply chain and ESG assessment

We understand that our impact extends throughout the entire value chain. Therefore:

We promote responsible practices among our suppliers and partners.

We incorporate environmental, social and ethical criteria into our evaluation and selection processes.

We participate in external corporate sustainability assessment systems, such as EcoVadis, in order to measure our performance, identify areas for improvement and reinforce transparency with international customers and partners.

Guiding principles

CRISMACHEM is committed to:

Integrating sustainability into its management system and corporate strategy.

Establishing measurable objectives and allocating the necessary resources to achieve them.

Acting in accordance with the Ten Principles of the United Nations Global Compact.

Contribute to the Sustainable Development Goals (SDGs), especially in the areas of responsible industry, innovation and climate action.

Maintaining clear and accessible communication with all stakeholders about our commitments and progress.

This Policy constitutes the framework for our actions in the area of sustainability and reflects our desire to move forward in a structured, measurable and transparent manner towards a more responsible and resilient business model.
